The invention relates to an antibody or antigen binding domain (or fragment, variant or derivative), which binds to an osteoprotegrin binding protein (OPGbp) and which is an antagonistic antibody. The antibody or antigen binding domain may be administered to inhibit osteoclast formation or activation, inhibit bone resorption in a mammal, prevent or treat loss of bone mass in a mammal and to prevent or treat tumour cell growth in bone. The loss of bone mass results from osteoporosis, metastasis of cancer to bone, rheumatoid arthritis, hypercalcaemia of malignancy and steroid-induced osteoporosis. The present sequence is an antibody light chain variable region complementarity determining region, CDR2, which can be incorporated into an antibody/antigen binding domain of the invention.
                                                                                                                                                                                                                                                                                     Antibodies that bind antagonistically to osteoprotegrin binding protein, useful for treating osteoporosis, metastasis of cancer bone, rheumatoid arthritis, hypercalcaemia of malignancy and steroid-indicad osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23-FEB-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a human anti-hepatitis B monoclonal antibody. Included in the invention are polynucleotide sequences AAC96948 - AAC96955 which encode fragments of the heavy and light chains of the antibody. Proteins and peptides represented by sequences AAB5215 - AAB52210 are fragments of the anti-hepatitis B light and heavy chains. Also included in the invention are PCR primers AAC96977 which are used in the construction of the antibody. The antibody exhibits antiinflammatory, and hepatotrophic activity, and can be used in a drug effective at preventing hepatitis B infection.

                                                                                                an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for
                                                                 treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent
                                  host disease.
                                                                                                                                                                                                                                                                                   AAB67490-99 and AAB67501-06 represents complementarity determining regions (CDRs) of human antibodies. The antibodies specifically bind thuman cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging

encoding different immunoglobulin binding protein (IgBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an IgBP that binds to a ligand, and transfected plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has at least 75% sequence identity to a framework region (FR) of a native IgM, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably heavy chain binding protein (CHBP) array in eukaryotic cells especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. Agrobacterium tumefaciens cells). The CHBP is useful for discovery of e.g. screening assays of IgBPs having desired characteristics. The present sequence is a mammalian The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides the invention. mmunoglobulin derived peptide that may be incorporated into an IgBP of

Also included are the nucleic acids encoding the antibody (or fragments). The antibodies or fragments are used for inhibiting proliferation, growth or differentiation of normal human B cells and to inhibit antibody production by B cells. They may also be useful for treating autoimmune diseases, such as systemic lupus erythematosus, psoriasis, multiple sclerosis, inflamm bowel disease (Crohn's disease), rheumatoid arthritis, and lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of specifically binding to a human CD40 antigen (a glycoprotein expressed on the surface of human B cells), where the antibody or fragment is free of significant agonistic activity when it hinds to the antibody of significant agonistic activity when it hinds to the antibody of significant agonistic activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when it hinds to the activity when activity when it hinds to the activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when activity when ac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc neurite outgrowth, regeneration, remyellation and neuroprotection in central nervous system (CNS). (1) is capable of inducing remyelination, cc promoting cellular proliferation of glial cells, and promoting Ca2+CC signaling with oligodendrocytes. An humanised antibody to (1) can be celleted from antibody sHIGM22 (LYM 22), ebvHigM MsI19D10, ebv HigM CC CB2bG8, AKUR4, CB21E12, CB21E7 or MSI19E5. (1) is useful for stimulating CC remyelination of CNS axons, stimulating proliferation of glial cells in CC CNS axons, or treating demyelinating disease of CNS in a mammal in need cof such therapy. (1) is capable of binding to structures and cells within CC CNS. (1) is preferably useful for treating a demyelinating disease of CNS of a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMEV) or for treating a human being having multiple sclerosis, or a human or domestic animal with a viral demyelinating disease, or a post-cc condition to stimulating remyelitation of CNS axons. The condition in a subject Methods where (1) is also useful for an in vitro method of CNS is also useful for preventing infection by a bacterium, virus or condition in a subject. Methods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in a subject wherhods where (1) is administered to a patient condition in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions in the cNS conditions conditions in the cNS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

of specifically binding to a human CD40 antigen (a glycoprotein expressed CC on the surface of human B cells), where the antibody or fragment is free CC of significant agonistic activity when it binds to the CD40 antigen, and the growth or differentiation is inhibited. The fragments comprise the complementarity determining region (CDR) of the light and heavy CC chains of the monoclonal antibodies secreted by a hybridoma consisting of 1588, 20C4, 12D9, 9F7 and 13E4. Also included are the nucleic acids care used for inhibiting proliferation, growth or differentiation of a normal human B cells and to inhibit antibody production by B cells. They may also be useful for treating autoimmune diseases, such as systemic lupus erythematosus, psoriasis, multiple sclerosis, inflammatory bowel disease (Crohn's disease), rhemmatoid arthritis, and lymphoma (especially Non-Hodgkin's Lymphoma). The present sequence represents to the antibody 12D9 kappa chain variable region VK.1.

This immunoglobulin molecule is capable of specifically binding with the hepatitis C virus (HCV) E2 antigen. The present sequence was obtained from a combinatorial antibody library. The alpha light chain peptide can be used to construct a recombinant human monoclonal antibody (MAb). The monoclonal antibodies exhibit immunological binding affinity for HCV E2 antigen and are cross-reactive with different HCV strains. They can be used to produce vaccine compositions which can be used to provide antibodies to HCV in a subject or to provide passive immunity or to treat HCV infected subjects. They can also be used to detect HCV and to monitor anti-HCV subjects.
                                                                                                                                                                                                                                                                                                           Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The consensus amino acid sequences for the subgroups of light chains (hK1 - AAR38590, hK3 - NGK, hK2 - GST, hL1 - AAR38591, hL2 - AAR38592, hL3 - AAR38593, hL6 - AAR38594, hK4 - AAR38595, hL4 - AAR38596, and hL5 - AAR38597) and heavy chains (hH3 - AAR38598, hH1 - AAR38599 and hH2 - AAR38597) and heavy chains (hH3 - AAR38598, hH1 - AAR38599 and hH2 - AAR38590) of human variable domains may be used to prepare, for example, a modified mouse antibody variable domain that retains the affinity of the natural domain for antigen while exhibiting reduced immunogenicity in humans.

Unlike other methods of humanisation, which advocate the replacement of entire antibody framework regions with those of human antibodies, this method involves only the introduction of human residues into those positions not critical for antigen binding. This ensures that the binding properties of the modified antibody

The present invention provides the protein and coding sequences for the variable regions of human monoclonal antibodies which are immunoreactive with human immunodeficiency virus-1 (HIV-1) envelope glycoprotein gp120. These can be used in diagnosis and therapy of HIV-1 infection.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score
